PUBLIC NOTICE:

Norfolk International Airport Runway 05/23 Rehabilitation Project

Norfolk International Airport (ORF) is undertaking a runway rehabilitation project to repair aging asphalt and concrete portions of the primary air carrier Runway 05/23 in two separate phases.

Important Dates:

- November 2023 – Phase 1 Construction of Runway 23 was completed.
- April 1, 2024 – Phase 2 construction of Runway 05 begins. This will require nighttime runway closures occurring from April 1 – November 15, 2024. During this time Runway 05/23 will be closed to all airline operations between 12:15am and 5:15am each night to allow work to take place on the airfield. This will be regularly communicated via NOTAMs (Notice to Air Missions).
- April 18 – October 31, 2024 – Temporary threshold relocation takes place, and the length of Runway 05/23 will be reduced to 6,800’.
- November 2024 – Phase 2 construction of Runway 05 is complete.

Planning for this project has been underway for over a year with participation by the airlines and associated suppliers. All considerations have been made to minimize the impact to airline operations and passenger/cargo air service. Completion of this project will extend the life of the primary commercial Runway 05/23 by more than 20 years.

Project Sponsors:

Norfolk Airport Authority – Airport Operator
Kimley-Horn Engineering – Airport Engineering Consultant
Flight Tech Engineering – Flight Operations Consultant
